

TSS System Health Check

Harsh conditions and aging can seriously affect your solar system, crippling or even stopping your production! This can easily be prevented by the TSS System Health Check. The TSS System Health Check comprises of a visual inspection of the entire solar energy system and a functional test of all electronic components of the system. The TSS System Health Check provides you a solid insight on the status of your system. It tells you what should be done in order to keep your systems healthy and to keep your production running.

The benefits of a TSS System Health Check...

- Avoid loss of production
- A report is provided on how to improve the operation and maintenance of your solar energy system
- Prevent expensive repairs or replacements
- Predict forthcoming problems and replacements enabling you to prevent shut down
- Increases Return on Investment
- Helps to optimize integration of different components
- Reduces Total Cost of Ownership

Extend your warranty

When a TSS System Health Check is conducted before the end of the warranty period of your TSS solar energy system, your warranty period will be extended by one year.*

Why companies choose TSS?

By choosing TSS you benefit from:

- The most concentrated resource of stand-alone solar energy expertise
- Expertise support in your area
- Wide experience in development, designing, engineering and field operations
- Longest system lifetime expectancy
- The craftsmanship to check your third party systems as well

* The warranty period will be extended with one year when recommendations/advised repairs following the health check are executed and the system is declared 100% functional. Since the system is still in its warranty the repairs are free of charge, only the health check will be charged.
